

# PowerPoint Alchemy

Thank you for trying the Animated Photo album Add In for PowerPoint 2002 – 2007 ONLY.

To install Make sure that macro security is set to Medium or lower in XP – 2003 or in 2007 to Disable with notification. In 2007 you may enable the developer tab from Office Button > PowerPoint Options > Popular or in earlier versions Tools > Macro > Security.

**NOW CLOSE POWERPOINT** and run the exe file. This will create a new toolbar. In 2007 you will need to click the Add In tab to see it.

In all cases you should avoid using very high resolution pictures as this will hinder the animations and will NOT give a better result. Resize pictures to not more than 8” wide and 96 dpi. If you do not have software to do this you might want to download Irfanview which is free! Use File > Batch Conversion and “set advanced settings” to 8” width and preserve aspect ratio, DPI approx 96.

Pictures should be in landscape format.

Regards

John Wilson

To use simply click the magic wand in the new toolbar and choose your frame and pictures. Animations are added automatically!
