

Installing and Using Line Space

Line Space is a free AddIn to replace the adjust spacing command in 2003. This was removed from 2007.

To install the Add In.

In 2007 you may need to enable the Developer tab. Do this from the Office Button and then PowerPoint Options > Popular

Make sure that macro security is set to “Disable WITH prompt”

IMPORTANT With any version CLOSE PowerPoint before continuing

Now simply run the .msi file to install the Add In. The file looks like this ...

Open PowerPoint and you should see a new group to the right of the Home Tab Commands.

To use simply select text (or a shape with text) and click on Increase or Decrease to change the line spacing by 0.1. Holding down Ctrl will give even finer precision control.

UnInstalling

Use the included un-intall program. You can access this either by running the msi file again OR from Control Panel > Uninstall Programs.

This is a free add in without support. We do however welcome any comments.
