## PowerPoint Perfect Path

### Introduction

Motion Path animations can be really useful in PowerPoint but it is very difficult to make them go EXACTLY where you want them to end up!

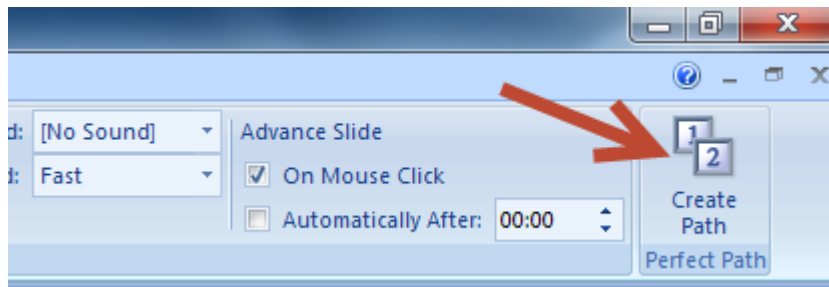

This AddIn solves this and allows the instant creation of Perfect Paths.

### Install (YOUR SERIAL IS THE DOWNLOAD PASSWORD)

Macro security must be set to medium or Low in earlier versions or in version 2007 "Disable with prompt".

**\*\*IMPORTANT\*\* Close PowerPoint before continuing.**  
**You must have a connection to the Internet to install.**

Run the installer file PerfectPath.msi. When you next open PowerPoint there will be a new button in the ANIMATION Tab.

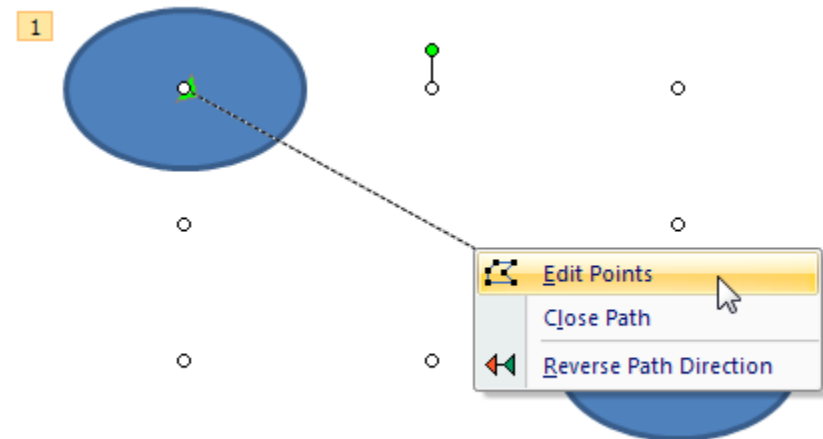

### Use

Make a COPY of the shape to be animated.

Move the COPY to the exact end point required.

Select first the ORIGINAL and then hold down CTRL and select the copy. When both are selected click the new button. The motion path is created! You can RIGHT click on the path and choose EDIT POINTS if you wish to edit the path leaving the end point static,

In Edit points mode you can drag the default point, add more and change the type of point to create curves.
